intersil REALTIME CLOCKS

RealTime Clock/Calendars with dual alarms (programmable frequency output X1227 and X1228 only), and on chip oscillator compensation. The X1227 and X1228 are also CPU Supervisor circuits with two polled alarms. The clock and alarm registers allow the clock to operate without loss of accuracy, even during read and write operations. The clock/calendar provides functionality that is controllable and readable through a set of registers. The clock, using a low-cost 32.768kHz crystal input, accurately tracks the time in seconds, minutes, hours, date, day, month and years. 2-wire interface interoperable with 512 x 8 bits of I^2C EEprom. The Supervisor circuits come in 4 reset voltages.

Panasonic® Voltage Detectors

Highly Reliable, Easy-to-Use CMOS LSI Is for Voltage Detection

The MN1380 Series is a series of devices with functions for:

- Monitoring the power supply voltage supplied to microcomputers and to LSI systems
- Generating the RESET signal for carrying out initialization when the power supply is turned ON
- Preventing runaway in systems when the power supply voltage fluctuates. Recently, there has been an increase in the number of battery-driven products such as cordless telephones, notebook-type personal computers, etc. In these products, highly accurate monitoring of the power supply voltage is an important point in terms of system operation and data backup. While maintaining the voltage detection precision of similar voltage detection devices so far, the MN1380 Series of devices consumes 1/10 the current. In addition, users can choose from one of three output formats: CMOS output, N-channel open drain and inverted CMOS output.

Description: The **TK112xxC** is an integrated circuit with a silicon monolithic bipolar structure. The regulator is of the low saturation voltage output type with very little quiescent current (65µA). The PNP power transistor is built-in. The I/O voltage difference is 0.17V (typ.) when a current of 200mA is supplied to the system. Because of the low voltage drop, the voltage source can be effectively used; this makes it very suitable for battery powered equipment. The on/off function is built into the IC. The over current sensor circuit and the reverse-bias protection circuit are built-in. It is a very rugged design because the ESD protection is high. Therefore, the TK112xxC can be used with confidence.

The **TK113xxCM** series of low dropout (LDO) voltage regulators are designed for use in battery powered equipment, portable communication devices or RF modules requiring a thermal enhanced SOT23L-6 package. The maximum continuous current power rating is 380mA.

Description:

TK111xxC is an integrated circuit of the silicon monolithic bipolar structure, and the regulator of low saturation output type with very little quiescent current (63µA). The PNP power transistor is built-in. The I/O voltage difference when the current of 200mA (typical) is supplied to the system is 0.2V. The voltage source can be effectively used therefore, it is the best for the battery use set. The on/off function is built into the IC. The current in standing-by mode becomes slight (pA level). 1.5-10.0V is arranged to the output voltage in 0.1V step. The output voltage is trimmed in high accuracy. The **TK717xx** is an integrated circuit with a silicon monolithic bipolar structure. The regulator is of the low saturation voltage output type with very little quiescent current. The PNP power transistor is built-in. The I/O voltage difference is 163mV (typ.) when a current of 200mA is supplied to the system. Because of the low voltage drop, the voltage source can be effectively used; this makes it very suitable for battery powered equipment. The on/off function is built into the IC. The current during standby mode becomes very small (pA level). In addition, the output short-circuit function works at off times. It is a unique characteristic by which the residual charge of the output side capacitor is rapidly discharged.

Series TK715xxA

Specifications:

• Reverse bias voltage protection • Wide operating voltage range: 1.8V-18V • Supply Voltage: -0.4V ~ 19V • Temperature Range: -30°C ~ 80°C • Line regulation: 3mV • Output Current: 155mA • Quiescent Current: 300µA • Lead free

Description:

TK715xxA is a low drop out regulator with very few quiescent currents (25µA). An internal PNP pass transistor is applied to achieve a low dropout voltage of 105mV (typical) at 50mA load current. Because the output current 100mA (typical) can be supplied to the system at the I/O voltage difference, 0.2V time, the voltage source can be effectively used. Therefore, it is the best for the battery use set. The output voltage is trimmed in high accuracy. The over current sensor circuit and the reverse-bias protection circuit are built-in.

Portescap DANAHER MOTION -SPECIALTY MOTORS

Stepper Motors

These stepper motors are very precise DC motors that move a specific degree of rotation with each pulse applied to its coils. Stepper motors can be controlled for either clockwise or counterclockwise rotation and can operate at very high speeds. Shaft speed is not affected by variations in torque. Unipolar motors have two coils wound on the same bobbin (4 coils total) where each winding is sequentially energized. Bipolar motors have only two windings and require a push-pull driver to operate. Holding torque is the force required to hold the shaft with back pressure applied. MNM is millinewton meter + torque **Operating Specification: • Maximum Operating Temperature:** 100°C **• Operating Temperature Range:** -20°C ~ 70°C **• Bearing Type:** Bronze sleeve **• Insulation Res. @ 500VDC:** 100MΩ **• Dielectric Withstanding Voltage:** 650VRMS 60Hz for 2 seconds **• Lead Wires:** 26AWG

Geared Stepper Motors

Standard 7.5 degree Stepper Motors offered with gear reduction for extremely high torque and precision. Perfect replacement for DC geared motors where accuracy is needed.

Digital Linear Actuators

Precise "In and Out" movements controlled by a stepper motor, these low-cost units provide industry-leading linear force positioning capability. An ideal linear actuator solution in medical equipment applications such as pumps, pipettes and scanners, as well as instrumentation and HVAC applications. These linear actuators are available in captive and non-captive versions, unipolar or bipolar coil construction, and industry-standard frame sizes.

AC/DC Geared Motors

Pb RoHS COMPLIANT

105 Series AC Gear Motor: Unidirectional operation assured by ball and slot "no-back" system. Motors listed are all clockwise rotation when facing the output shaft. **Characteristics:** Rotor Speed 600 RPM, 120VAC, 60Hz Coil, 2.7 Watts, -20°C ~ 55°C Operating Temperature. Motor develops 300oz-in. Torque starting and running at 1 RPM. To determine torque available on motors shown, divide 300oz-in by listed motor speed.

6100 Hysteresis Series Motor: provides smooth quiet performance and allows operation to a stall condition without damage or an increase in temperature. Perfect for HVAC controls, Automatic Teller Machines and other applications.

800I Series DC Gear Motor: Basic 2400 and 4800 armature speed used. Geartrain rating 30oz-in dynamic, 90oz-in static. Starting and running torque 60oz-in at 1 RPM. These ratings are conventionally stated for output geared to 1 RPM. Motor output speed will be higher if load is less than 30oz-in Voltages offered 12VDC and 24VDC. DC motors are reversible by reversing polarity at terminals.

AAVID THERMALLOY

Heat Sinks

Aavid's ULTRAstick is a unique phase-change thermal interface material that surpasses grease in thermal performance and long-term stability. This solid, silicone free, paraffin based thermal compound changes phase at 60°C, with a concurrent volumetric expansion that fills gaps between the mating surfaces. One cost effective application leaves a thin, film like deposit, providing excellent heat transfer and low interface thermal resistance.

Features:

- Thermal resistance 20% lower than thermal grease, with significant long-term reliability benefits
- Excellent heat transfer properties, consistent at mounting pressures from less than 5 psi to more than 200 psi
- No run-out, migration, dry-out, or flaking that can occur with typical thermal grease
- Non-toxic and inert
- Electrically non-conducive
- Easy to use and dry to the touch after application, reducing labor costs
- Each bar covers approximately 1,000 in^2

"PGS" (Pyrolytic Graphite Sheet) Heat Sink Sheets

PGS (Pyrolytic Graphite Sheet) is a heat sink sheet with high thermal conductivity and high flexibility. PGS is made of graphite with a structure that is close to a single crystal. This is achieved by highly-oriented polymer film sheet, a process which has never been implemented before.

Features: • Excellent thermal conductivity: 600 ~ 800 W/(m.K), twice as high as copper, three times as high as aluminum • Light weight: the same as water (Specific gravity: 1.0 g/cm³), 1/9 that of copper, 1/3 that of aluminum • Flexible sheet, easy to be cut or trimmed and withstands repeated bending • High heat resistance: Stable up to about 400°C even in the air • Low thermal resistance • The main component is carbon. Minimal impurities and outgassing • Excellent heat transferring performance. Heat sink and even distribution of heat

Application Examples: • Notebook personal computers, DVDs, DVCs, mobile phones • Semiconductor manufacturing equipment (Sputtering, Dry etching, Steppers) • Optical communications equipment

Wakefield Engineering

Heat Sinks

Wakefield Engineering is recognized as a worldwide leader in innovative thermal management solutions. Their products range from board level heat sinks for both surface mount and thru-hole, to fan mounted heat sinks for microprocessors and CPUs. Wakefield Engineering offers a single source for all of your thermal requirements. DeltaPads are replacements to heat sink grease but without any mess. They are heat conducting, electrically isolating pads to go between the heat sink and your semiconductor device. TO-220 heatsinks will also fit TO-202 and TO-126 packages.

High Performance Heat Sinks

ATS maxiFLOW™ Heat Sinks have a low profile, spread fin array to maximize surface area for more effective convection (air) cooling. Their extruded aluminum fabrication minimizes thermal resistance and weight. Testing at an air flow rate of just 100 lfm shows that device junction temperatures (Tj) can be reduced by more than 40 percent below the temperatures achieved using other heat sinks.

The maxiGRIP™ Heat Sink Attachment System features a plastic frame clip that snaps securely around a component's perimeter. A stainless steel spring clip runs through the heat sink's fin field, fastens securely to the plastic frame and applies steady, even pressure to the component. The system allows easy sink detachment and reattachment with no damage to the component.

There is no over or under tightening of the sink to the processor. Component/heat sink assemblies using maxiGRIP meet Telcordia GR-63-Core Office Vibration; ETSI 300 019 Transportation Vibration; and MIL-STD-810 Shock Testing and Unpackaged Drop Testing standards.

THE BERGQUIST COMPANY

Heat Sink Pads "The Alternative To Grease"

Sil-Pad 600® is a thermally conductive, silicone elastomer filled with special ingredients to provide higher thermal properties than the original fiberglass based Sil-Pad. This material has excellent physical and mechanical characteristics while remaining cost competitive. (Electrically Insulating Material)

Sil-Pad 900-S® family of thermally conductive insulation materials are designed for low cost applications requiring high thermal performance. Intended as an improved Sil-Pad 600 alternative.

Q-Pad 3® is a thermally conductive, fiberglass reinforced graphite imbedded elastomer which conforms to surface textures extremely well. This material eliminates problems associated with thermal grease such as contamination of electronic assemblies and reflow solder baths. Q-Pad 3 may be installed prior to soldering and cleaning. (Electrically Conducting Material)

Sil-Pad K10® is a thermally conductive Kapton composite film coated with boron nitride filled polyester resin, offering the highest thermal properties of the Kapton insulators with minimum thickness and lower thermal resistance. Designed to replace brittle ceramic insulators. (Electrically Insulating Material)

CPU Pad® is a thermally conductive, electrically insulating, Kapton double coated tape. Typically used between the CPU and heat sink, it was designed to be used in place of clips used to attach heat sink to CPU. No clamping times or high pressure is required.

SPT 400 is a thermally conductive insulation for clip mounted plastic power devices. These TO-220 thermal tubes slip over the semiconductor device and conduct the heat to the heat sink and clip. Designed to be used on heat sinks with metal clips to attach device to heat sink. (Electrically Insulating Material)

HI-FLOW™ 115-AC is a thermally conductive fiber reinforced phase change material. The product consists of a thermally conductive 65° C phase change compound coated on a fiberglass web with an adhesive coating on one side for attachment to a cold heat sink. Handles like a Sil-Pad at room temperature and flows like high quality grease at elevated temperature.

Bond Ply™ 100 is a thermally conductive, double-sided pressure sensitive adhesive tape. The tape consists of a high performance, thermally conductive acrylic adhesive coated with a fiberglass reinforced interweave. Bond Ply 100 is designed to attain high bond strength to a variety of surfaces and to maintain high bond strength with long term exposure to moderate heat and high humidity. Typical Applications: • Mounting a heat sink to a BGA graphic processor • Mounting a heat sink to a computer processor • Mounting a heat sink to a drive processor • Mounting a heat spreader to a power converter PCB • Mounting a heat spreader to a motor control PCB.

Gap Pad™ 1500 is designed to cost-effectively maximize heat transfer from electronic components to heat sinks or heat spreaders. GP 1500 is a highly conformable low-modulus material that fills air gaps due to steps, rough surfaces and high stack-up tolerances. The softness relieves stress and absorbs shocks minimizing damage to delicate leads. GP 1500 is an electrically isolating material that allows its use in applications requiring isolation between heat sinks and high voltage, bare leaded devices.

Gap Pad™ 1500R has the same highly conformable low modulus polymer as the standard Gap Pad™ 1500. The fiberglass reinforcement allows for easy material handling and enhances puncture, shear, and tear resistance. The tacky nature of both sides of the material allows for good compliance to mating surfaces of components, further reducing thermal resistance.

Sil-Pad K-4® uses a specially developed film which has high thermal conductivity, high dielectric strength and is very durable. Sil-Pad K-4 combines the thermal transfer properties of well-known Sil-Pad rubber with the physical properties of a film. Sil-Pad K-4 is a durable insulator that withstands high voltages and requires no thermal grease to transfer heat.

Sil-Pad K-6® is a medium performance film-based thermally conductive insulator. The film is coated with a silicone elastomer to deliver high performance and provides a continuous physically tough dielectric barrier against "cut-through" and resultant assembly failures.

Sil-Pad 1000® has the same excellent mechanical and physical characteristics of our Sil-Pad 400 material while offering a 35% reduction in thermal resistance. Sil-Pad 1000 is a composite of silicone rubber and fiberglass. It is specially filled and offers low thermal resistance. Sil-Pad 1000 is non-toxic and resists damage from cleaning agents. It is flame retardant and specially formulated for use as a thermally conductive insulator.

Sil-Pad 2000® is Bergquist's high performance, high reliability, thermally conductive insulator. Sil-Pad 2000 is designed for demanding military/aerospace and commercial applications. In these applications, Sil-Pad 2000 complies with military standards. This silicone elastomer is specially filled to maximize the thermal and dielectric performance of the filler/binder matrix. The result is a "grease-free", conformable material capable of meeting or exceeding the thermal and electrical requirements of high reliability electronic packaging applications.

Gap-Pad® VO Ultra Soft is recommended for extremely low stress applications. The viscoelastic nature of the material also gives excellent low stress vibration dampening and shock absorbing characteristics. Gap Pad VO Ultra Soft is an electrically isolating material which allows its use in applications requiring isolation between heat sinks and high voltage and bare leaded devices.

TO-220 Solder Tail Transistor Sockets

P.C. Board Mount: .100" (2.54mm) center. These three circuit transistor sockets are preassembled and ready for soldering to a P.C. Board. The proven double cantilever design eliminates circuit failure due to thermal expansion and/or mechanical tolerances.

Linear movement of the transistor leads in the socket does not affect contact reliability.

Material: Tin-Plated Brass, 94V-2 Rated Nylon

IERC
A CTS COMPANY

Heat Sinks

International Electronic Research Corporation has helped pioneer the development of semiconductor heat sinks since 1954. Primarily used by all levels of OEM's engaged in the manufacture of commercial and military equipment, IERC maintains stock and support from prototype through production. IERC has prided themselves for their flexible manufacturing, quality products and on-time delivery. Clip-On versions have a built-in clip for attaching a device to a heat sink without additional hardware, positive locks prevent the semiconductor from sliding out. TO-220 versions will also fit TO-202, TO-218 and TO-126 packages. Wattage values listed are at still air conduction only. Moving air will increase this value.

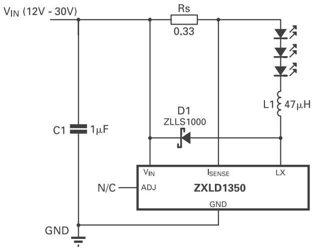
LED Lighting ICs

Zetex has developed a range of high efficiency, cost effective and versatile LED driver ICs in space saving packages to tackle a wide range of existing and emerging applications including:

- Display screens backlighting
- Low-voltage halogen replacement LEDs
- Architectural and decorative lighting
- Camera flash
- Automotive lighting
- Solar powered traffic signs



Features:

- 2.5 to 5.5V internal switch — ZXLD1100 / 1101 / 1601 / 1615 / 1937
- 1.6 to 5.5V internal switch — ZXLB1600
- 7 to 30V internal switch — ZXLD1350
- 0.8 to 8V external switch — ZXSC300 / 310
- 1.8 to 8V external switch — ZXSC400 / 440
- Single Cell LED Driver — ZXSC380
- 7V-30V input, 1A LED driver with internal switch — ZXLD1360

The ZXLD1350 is a continuous mode inductive buck converter designed to drive up to three 1W series connected white LEDs from a 12V source. Current and Sense Monitors

The ZXCT range of high side current monitors and current sense amplifiers provides elegant design solutions for current measurement and power control. **ZXCT1009:** This current sensing monitor takes a high side voltage developed across a current shunt resistor and translates it into a scaled ground referenced current. **ZXCT1010:** Offers reduced typical offset and improved accuracy at low sense voltages. **ZXCT1021/1022:** These current sense amplifiers are particularly suited to low sense voltage applications.

Analog Video Products

The Zetex range of video solutions has been expanded by the addition of a sync separator and a DC restore amplifier. **ZXFV4583:** Separates out the embedded sync information from PAL, NTSC, SECAM and other analog video signals. **ZXFV4089:** Uses a sync pulse (typically from a sync separator) to restore the video black level to the correct DC voltage. The high speed amplifiers/buffers include quad and single amplifiers plus multi-channel unity-gain buffers. **ZXFV202:** Single video amplifier is available in SOT23 and SO8 offering superb differential gain and phase performance of 0.01%/0.01° respectively. **ZXFV301N16/ ZXFV302N16:** 4:1 multiplexers are for use in video and other high speed applications. **ZXFV301/302:** With greater versatility, they have different channel selection plus an output enable.
